Abstract

The modern world is extremely dynamic - this is shown in particular by problems with migration related to the climate crisis and armed conflicts - in particular Russia's attack on Ukraine. The ability to deal with unusual situations - in particular - threats in times of peace and war are one of the most important competencies that should be shaped by a modern school. Coping does not only mean reacting to the threat itself, but also preventive actions and expanding the student's own awareness.

The aim of the study

A survey was conducted using the CAWI method. The survey concerned various aspects of peacetime and wartime security. The data was collected by students of the 8th grade of the primary school and the 1st grade of the high school DobraTU im. Tosi Kozłowskiej in Warsaw. 250 responses were collected. The presentation will show the results of respondents answering selected questions, in particular those concerning the development of key competences and awareness of risk prevention.
