## JORDAN TYPE OF AN ARTINIAN ALGEBRA PROBLEM SESSIONS

NANCY ABDALLAH AND PEDRO MACIAS MARQUES

## 1. Preliminaries

**Exercise 1.1.** Consider the Artinian algebra  $A = k[x, y]/(x^2, xy^2, y^5)$ , let m = (x, y) be its maximal ideal.

- (1) Find the Jordan types of  $y^2$ , xy, and  $xy + y^3$  in A.
- (2) Write down a Jordan basis for  $y^2$ , and the corresponding Jordan canonical form.
- (3) Describe the locus of the Jordan type (5, 2), i.e. the set

$$L_{(5,2)} = \{\ell \in \mathsf{m} : P_{\ell,A} = (5,2)\}.$$

(4) Suppose k is infinite. Which is the generic Jordan type of *A*?

**Exercise 1.2.** Consider the Artinian algebra  $A = k[x, y, z]/(yz - x^3, y^3, z^2)$ , a non-graded complete intersection.

- (1) Suppose char k = 2 and compute the Jordan type of  $\ell_1 = x + y + z$ .
- (2) Suppose chark  $\notin \{2,3,5\}$  and write  $\ell = ax + by + cz + \ell'$ , with  $\ell' \in m^2$ . Show that  $P_{\ell,A} = (7,5,3,3)$  if and only if  $ab \neq 0$ .

**Exercise 1.3.** Let *A* be an Artinian local algebra, with socle degree *j*, let m be its maximal ideal, and suppose that k = A/m is an infinite field.

- (1) Show that there is an element  $\ell \in m$  such that  $\ell^j \neq 0$ .
- (2) Show that if  $\ell' \in m^2$  then its Jordan type is not the generic Jordan type of *A*.

**Exercise 1.4.** Consider the algebra  $A = k[x, y]/(x^4, y^3)$ . Use the Lemma 2.11 to compute the Jordan type of x.

**Exercise 1.5.** Consider the algebra  $A = k[x, y, z]/(xy, xz, yz, x^j - y^j, x^j - z^j)$ . Compute the Jordan type of x.

**Exercise 1.6.** Let A = k[x, y]/I be an Artinian algebra, and let  $P_{x,A} = (p_1, \dots, p_s)$ . Consider the algebra B = k[x, y, z]/J, where  $J = (xz, yz, z^j, I)$ . What is the Jordan type  $P_{x,B}$ ?

## 2. Lefschetz properties

**Exercise 2.1.** Consider the Artinian algebra  $A = k[x, y]/(x^2, y^2)$ .

- (1) List all partitions of 4 that are dominated by  $H(A)^{\vee}$ .
- (2) Confirm that all partitions are attained as the Jordan type of an element in the maximal ideal.

**Exercise 2.2.** Consider the Artinian algebra  $A = k[x, y]/(x^2, xy^2, y^5)$ , let m = (x, y) be its maximal ideal. Give an example of a partition that is dominated by  $H(A)^{\vee}$  but is not the Jordan type of any element  $\ell \in m$ .
